Vecoplan at Ecomondo: a strong partner for recycling companies

The problem solvers

Ecomondo is a leading international trade fair for materials and energy generation. It will be taking place from the 26th to the 29th of October in Rimini on the Italian Adriatic coast – and Vecoplan AG will be there as a leading specialist for efficient recycling technologies and as a solution provider for mechanical material processing. Vecoplan customers always have a strong partner at their sides.

Vecoplan is a leading supplier of environmental technologies for recycling and processing waste materials. Visitors to Ecomondo in October will have a chance to get a first-hand impression of the machine manufacturer's in-depth expertise and extensive product range at Booth 033 in Hall A2. After many years of cooperation with an Italian partner, the recycling specialist company is continuing to strengthen its presence in the Italian market. The service division is being significantly expanded and an independent sales office is being established. Vecoplan complements its digital services with reliable local services and a dependable spare parts supply for its Italian customer base.

The company provides mechanical material processing solutions for the recycling industry, encompassing machinery, systems and service. Vecoplan will be demonstrating its professional expertise at Ecomondo with the Vecoplan Smart Center (VSC) and other innovative products. The VSC, a new and powerful digitalisation concept, offers a modern communication interface between Vecoplan and the customer's plant – the VSC.connect system. The user can access services such as document management and remote service. The integrated, intuitive VSC.control operating panel serves as a communication medium for the machine's control system and as a live link to the Vecoplan technicians. This enables the solution provider to see everything that's happening on the customer's Vecoplan machines.

The VEZ 2500 TT, which Vecoplan will be showing in Rimini, is also equipped with this operating panel. This high-performance post-shredder is used for producing refuse-derived fuels (RDF) from production and sorting waste, packaging materials and the high-calorific

fraction of domestic and commercial waste. The resulting fuels can then be used as an energy source in cement works and power plants.
