

*Vecoplan focuses on solutions for RDF processing at RWM*

## **Efficient use of resources starts with the right technology**

**Vecoplan will be exhibiting at the Resource & Waste Management Expo (RWM) in Birmingham once again this year. At stand ME-C250, the mechanical engineering company will present its latest technologies for shredding, conveying, and storing recyclable materials. Particular focus will be given to the processing of refuse-derived fuel (RDF), which is a growth market in the United Kingdom.**

“We look forward to meeting our customers, partners and interested parties at RWM. The trade fair has always been one of the most important events of the year for us, providing an opportunity to forge new connections and discuss technological advancements in recycling,” says Ruben Maistry, Head of International Sales Markets at Vecoplan. RWM in Birmingham is considered one of the leading trade fairs for innovations and trends in recycling and waste management. At stand ME-C250, the Vecoplan trade fair team will present its shredding technologies, which can process a variety of materials into high-quality outputs.

### **The right solution for every shredding stage**

At the trade fair, Vecoplan is presenting itself as a solution provider for the production of high-quality substitute fuels. Its machine portfolio includes the VEZ 3200, a powerful re-shredder specially designed for producing RDF from pre-treated materials. It ensures consistently high, homogeneous RDF output quality. Equipped with the energy-efficient HiTorc direct drive, the VEZ 3200 offers a consistently high throughput with minimal maintenance and no mechanical drive elements. The robust VRZ double-shaft shredder is used for pre-shredding. Thanks to its special rotor, it can also reliably process bulky materials, making it ideal for continuous operation in demanding recycling and waste treatment plants. “With our system solutions for pre- and post-shredding, we cover the entire RDF processing chain efficiently, durably, and with flexible adaptability,” adds Ruben Maistry. “We are seeing growing interest in tailor-made plants for alternative fuels, particularly in the British market.” Vecoplan not only manufactures individual machines, but also offers solutions for the entire material handling process. From material reception and state-of-the-art conveyor technology to material storage, the company provides complete turnkey solutions. “Our goal is to contribute to a sustainable circular economy with technologically advanced systems. RWM offers us the ideal framework for achieving this, enabling us to maintain direct contact,” concludes Maistry.

**Vecoplan AG** is a producer and supplier of machines and systems for processing and handling primary and secondary raw materials for material and thermal recycling. These include wood, biomass, plastics, paper, other materials, and household and commercial waste. The company lays the foundation for functioning recycling thanks to its extensive portfolio. Vecoplan supports its customers as a partner for single-machine orders, complex plants, and mega projects. 580 employees currently work at the company's sites in Germany, the USA, the UK, Spain, Poland, Italy, and France.
