

*Vecoplan AG at Eurobois 2026 in France*

## **Comprehensive solutions for top quality in wood waste recycling**

**At Eurobois 2026, one of the first major trade fairs of the new year, Vecoplan will be presenting comprehensive solutions for the economical and high-quality processing of wood residues. As a turnkey machinery supplier, the company combines robust machines, state-of-the-art technology and digital services to create integrated processes.**

As one of the leading trade fairs for the European wood industry, Eurobois, which will take place from 3 to 6 February 2026, has always provided an opportunity for decision-makers from across the entire value chain to exchange ideas. Vecoplan AG is considered one of the leading full-range suppliers of machinery and equipment for the wood and wood-based materials industry and will be back in Lyon in 2026. From shredding, conveying, screening and separating to storage, Vecoplan offers integrated system solutions for the economical use of wood residues. The company combines robust machines with state-of-the-art technology, as this is the only way to achieve the high quality of wood chips demanded by the market. The better the shredded material, the higher the value of the by-products, such as wood chips or sawdust.

### **Efficient shredding and digital transparency**

Vecoplan has had its own branch in France since 2023. Bertrand Thiebold, Area Sales Manager on site, explains: "Our customers particularly praise our comprehensive plant concept, which covers all process steps, as well as our flexibility in project planning. In addition to efficient shredding, we also take care of reliable material logistics. Our digitalisation concept, the VSC, is also becoming increasingly popular." The Vecoplan Smart Centre (VSC) enables transparent real-time monitoring of all relevant operating data such as material flow and plant utilisation. Continuous data collection creates a reliable basis for ongoing analysis and optimisation of plant operation. The VSC provides digital support for troubleshooting via a remote service function. Service employees can thus connect to the customer's machine online via secure remote access.

"With our broad portfolio and technological innovations, we offer individually configurable systems tailored to the requirements of our customers. High quality and maximum flexibility

are always our focus,” Bertrand Thiebold summarises. The international Vecoplan team will be available for discussions at Eurobois at stand 6F 118.
